

Notes for handling SICA -Small Interface Cable Adapter-

- 1) Do NOT bend flex cable too sharply, because it might break the internal conductive trace. Insert or extract the cable using the stiffener.

- 2) SICA is developed for tests, evaluations, and / or development of the electronics system development in laboratory environment; Therefore SICA does not satisfy any EMI standards or safety rules.

- 3) SICA should not be used for the electronics or electrical systems where EMI and reliability against environments can be a safety factor, such as transportation, medical, navigation, nuclear power control system and etc.

- 4) While developing a new application using SICA makes sure you follow the pin diagram exactly as shown in this manual.

Please refer to the technical information to owe more detail.
